

TED STEINBERG

American Green: The Obsessive Quest for the Perfect Lawn

Ted Steinberg

American citizens are locked in a love-hate relationship with their lawns, and Ted Steinberg tells you why. The increase of the perfect lawn represents essentially the most profound ameliorations within the heritage of the Yankee landscape. This present day the garden is considered one of America's prime "crops," outstripping cotton in acres via an element of two. "American Green," Ted Steinberg's witty disclosure of this occasionally extraordinary phenomenon, strains the background of the garden from its explosion within the postwar suburban group of Levittown--just miles from the place Steinberg grew up--to the current love affair with turf colorants, leaf blowers, and using mowers. For part a century, Americans were on a quest for the greenest, weed-free, ultra-trim turf imaginable. Yet perfection has its costs. Mixing muckraking journalism and social history, Steinberg seems to be at either the lighter and the darker aspect of the all-American landscape, from mower injuries and pesticide poisonings to lawn-mower racing and the guy so hooked on perfection that he re-created Augusta's twelfth gap in his backyard. Forty illustrations.

First-class book! An individual who owns a backyard may still learn this. Reads fast with an outstanding mixture of tale and facts. Quotes: It is incorrect to attract a pointy line in one's mind's eye among the "nature" current at the Rocky Mountain entrance and that to be had within the suburbanite's personal entrance yard. The wildlife came across on even the main ideal and stylized of lawns is not any much less actual than that on the Arctic nationwide flora and fauna Refuge. Different, yes, yet to attract too sharp a contrast among the carefully settled global of Alaska and the American Green: The Obsessive Quest for the Perfect Lawn dense suburbs of Levittown is a prescription for the plundering of common resources. You may see how the yard, conceived as much less ordinary and therefore less significant than the noticed owl, is well ignored. The purpose is underscored via learn displaying that, surprisingly, those that evince predicament for the surroundings usually tend to use chemical compounds on their yards than people who are much less ecologically aware. (218) "Yards and gardens patched with grass and stitched with hedges all throughout America," [Sara:] Stein wrote in her 1933 vintage *Noah's Garden*, "constitute a vast, approximately continuous, and extraordinarily impoverished ecosystems for which we ourselves, with our mowers, shears, and erroneous collection of plants, are responsible." Morally accountable is what she means. "We can't in equity rail opposed to those that smash the rain wooded area or threaten the noticed owl after we have made our personal yards uninhabitable." (196) Even within the wake of Rachel Carson's best-selling *Silent Spring*, American citizens in 1963 spent approximately as a lot cash battling crabgrass with chemical weed controls as they contributed to the Yankee Melanoma Society.
