What this ebook does admirably is exhibit the predator / prey pyramid beginning on the backside with plant life. youngsters can simply see that many predators are, themselves, the prey and extremely few are on the most sensible of the meals chain. The e-book does not cease there, though. each one species of predator within the In concentration portion of the e-book indicates their classification, a map of the realm displaying the place they live, a listing of evidence in regards to the animal or species, and a demonstration in their habitat. on the finish is a type tree of vertebrates and invertebrates. Very properly illustrated. With lots of information and remarkable illustrations throughout, it is a publication that's worth buying!
