Sinnesphysiologie Programmiert by Robert F. Schmidt

Robert F. Schmidt

Das vorliegende Buch ergänzt Sinnesphysiologie Programmiert sich mit der 1971 im gleichen Verlag erschienenen "Neurophysiologie programmiert" zu einer aufeinander eingestellten und in sich geschlossenen Einführung in die animalische Physiologie. Da sie keinerlei anatomische oder biochemische Kenntnisse voraussetzt, sollte jeder, der das Abitur oder diesem vergleichbare Kenntnisse besitzt, in der Lage sein, sich im Selbststudium den Inhalt dieser Einführung ohne Verständnisschwierigkeiten anzueignen. Jeder der 25 Lektionen dieses Buches sind die zugehörigen Lernziele in operativer Form vorangestellt, d. h. es ist nicht nur beschrieben (a) welche Kenntnisse vom Studenten erworben werden sollen, sondern es ist (b) auch definiert, in welcher Weise der Schüler den Erwerb dieser Kenntnisse zeigen soll (z. B.: "In Auswahl-Fragen erkennen können . . ."). Die Lernziele sind auf Studenten der Physiologie im Haupt- und Nebenfach abgestimmt, additionally auf Mediziner, Psychologen, Biologen, Zoologen, (Bio)Chemiker, (Bio)Physiker, Pharmazeuten und Sportstudenten. Für die Medizinstudenten sind die Lernziele sicher hier und da nicht vollständig. Die Autoren und der Herausgeber sind aber der Auffassung, dass die Lernziele der Neuro- und Sinnesphysiologie insgesamt diejenigen Kenntnisse umfassen, die in diesem Teil der Physiologie für ein gutes Abschneiden in den ab 1974 schriftlichen ärztlichen Vorprüfungen notwendig sind. Das Studium der Sinnesphysiologie setzt neurophysiologische Kenntnisse voraus. Auf diese Voraussetzung kann nicht verzichtet werden, da Reizaufnahme und -Verarbeitung des Organismus überwiegend durch neuronale Strukturen erfolgt. In diesem Buch ist davon ausgegangen, dass dem Leser die Grundbegriffe und -tatsachen der Neurophysiologie etwa entsprechend den Lernzielen der "Neurophysiologie programmiert" bekannt sind.
